

## What's New in Analyzer Version 4.3 Documentation – March 2008

### Data Definition Wizard

- Added a “clear all fields” button on the Identify Fields screen
- Ensure suggested table name doesn't end with an underscore and become “hidden”

### Commands

- Enhanced the COMPARE command to behave like VERIFY when it encounters maximum number of errors
- Added the ability for fields to be moved up/down in command dialogs
- Allowed SQL relational tables as the child file for RELATIONS

### Edit Table Layout

- Widened the List View, and shortened the filter area
- Now displays the “flattened” data rather than the raw delimited data

### General

- Launched the Spanish version
- Updated some of the buttons on the button bar
- FMT files can now be added to the object list even if they have been dynamically created since the project was first opened
- Added information in properties to include the ORDER information for relational database tables
- Optimized date field conversions

### LegacyLink™

- Improved the LegacyLink install so it detects if there is already a project specified so it isn't overwritten during the update

### Windows Server

- Added a pop-up dialog with any native SQL errors encountered when accessing relational database tables
- Added a warning message if the output prefix is empty or invalid when attempting to connect
- Added the ability to compress output data written by Arbutus. This provides 'Zip-level' compression of 85% or more, without affecting performance

---

*Based on 25 years of innovation excellence, Arbutus delivers the very best in purpose-built audit analytics technology to meet the exacting demands of today's business environment. Auditors, business analysts, and fraud investigators rely on Arbutus audit software to enhance their testing, analysis, and compliance capabilities.*
